

POSITION SEARCH
Junior Scientist - Oncology

The Company

Noble Life Sciences (Woodbine, MD) is a contract research organization (CRO) providing services in the fields of preclinical drug, vaccine and medical device development and testing. Services offered range from early product discovery to GLP-compliant studies for regulatory submissions.

The company offers integrated preclinical drug development services including cellular and animal disease model design and development, non-GLP and GLP efficacy, toxicity, biodistribution, and product release studies in broad range of animal species.

The Position

We are looking for a talented and highly motivated individual with experience in molecular and cell biology, and a background in cancer biology. The Research scientist will be a member of a non-clinical team responsible for planning and executing internal research activities and conduct molecular biology/cell biology laboratory work in support of an oncology clinical product. This individual will conduct laboratory experiments in cellular and molecular biology to characterize therapeutic molecules and targets. Requirements include ability to work independently, organize and maintain a research laboratory, design and perform in vitro assays, and collect and interpret data as appropriate. The individual should have strong written and oral communication skills and the ability to manage internal and external projects. This is a key position within the organization with significant prospects for career growth as the company continues to increase the breadth and scope of its business. This position reports directly to the Chief Scientific Officer.

Responsibilities include but are not limited to:

- Design and execute in vitro cell biology and molecular biology experiments
- Perform technical procedures in a research laboratory under minimal supervision
- Maintain an organized and detailed experimental record and laboratory notebook
- Analyze, interpret, and report results and prepare presentations
- Support the day-to-day operation of the on-site research laboratory
- Ability to manage internal and external projects
- Assist with the Quality Assurance Unit (QAU) in determining compliance with GLP.
- Provide assistance to non-clinical team members and other related duties as assigned

Qualifications & Specifications

- PhD in molecular biology, pharmacology, immunology, or related field
- Preferred:
 - Experience in small molecule cancer therapeutic development
 - At least two years of post-doctoral or industry experience
 - Experience in analyzing large datasets using bioinformatics tools
- Possess outstanding interpersonal, oral and written communication skills
- Ability to work independently
- Excellent time management skills and proficiency at multi-tasking

Noble Life Sciences is an equal opportunity employer and offers professional development opportunities and comprehensive benefits package.
